## Employee Benefits in the United States - March 2015

Retirement benefits were available to 66 percent of private industry workers in the United States in March 2015, the U.S. Bureau of Labor Statistics reported today. Employer-provided retirement benefits were available to 31 percent of private industry workers in the lowest wage category (the $10^{\text {th }}$ percentile). By contrast 88 percent of workers in the highest wage category (the $90^{\text {th }}$ percentile) had access to retirement benefits. In state and local government, 61 percent of workers in the lowest wage category had access to retirement benefits, compared with 98 percent of workers in the highest wage category. (See chart 1 and table 1.)

The share of premiums workers were required to pay for their medical coverage varied by bargaining status. Private industry nonunion workers were responsible for 23 percent of the total single coverage medical premium, whereas the share of premiums for union workers was 13 percent. The share of premiums for family coverage was 35 percent for nonunion workers and 16 percent for union workers. (See chart 2 and tables 3 and 4.)

Chart 1. Access to retirement benefits by lowest and highest wage categories, March 2015

Chart 2. Share of medical premiums paid by private industry workers, March 2015

These data are from the National Compensation Survey (NCS), which provides comprehensive measures of compensation cost levels and trends as well as incidence and provisions of employee benefit plans.

Additional findings include:

- Full-time workers in state and local government had high rates of access to major benefits: 99 percent had access to retirement and medical care benefits, and 98 percent to paid sick leave. For part-time workers, 39 percent had access to retirement benefits, 24 percent to medical care benefits, and 42 percent to paid sick leave. (See tables 1, 2, and 6.)
- Paid holidays were provided to 90 percent of full-time and 37 percent of part-time workers in private industry. In state and local government, 74 percent of full-time workers and 30 percent of part-time workers had access. (See table 6 and Technical Note.)
- Access to benefits differed among some occupational groups. For private industry, 87 percent of workers in management, professional, and related occupations had access to medical care, compared with 41 percent in service occupations. In state and local government, the corresponding figures were 89 percent and 82 percent, respectively. (See table 2.)
- For civilian workers, access rates to medical care ranged from 53 percent for the smallest establishments (those with fewer than 50 workers) to 90 percent for the largest establishments (those employing 500 workers or more). Access to retirement benefits ranged by establishment size from 46 percent to 91 percent. (See tables 1 and 2.)
- Access to medical care benefits for private industry workers was 86 percent in goodsproducing industries, compared with 66 percent for workers in service-providing industries. The employee share of family medical premiums was 27 percent for workers in goods-producing industries and 33 percent for workers in service-providing industries. (See tables 2 and 4.)

More information can be obtained by calling (202) 691-6199, sending e-mail to ncsinfo@bls.gov, or by visiting www.bls.gov/ebs.

## NOTE

More information will be published in September 2015 on the incidence and provisions of health care benefits, retirement benefits, life insurance, short-term and long-term disability benefits, paid holidays and vacations, and other selected benefits. For the latest benefit publications see www.bls.gov/ebs.

## TECHNICAL NOTE

Data in this release are from the National Compensation Survey (NCS), conducted by the U.S. Department of Labor, Bureau of Labor Statistics (BLS). This release contains March 2015 data on civilian, private industry, and state and local government workers in the United States. Excluded are federal government workers, the military, agricultural workers, private household workers, and the self-employed. This news release provides data on the incidence of (access to and participation in) selected benefits and the share of premiums paid by employers and employees for medical care.

## Calculation details

Average hourly earnings from sampled occupations within an establishment were used to produce estimates for worker groups within six earnings categories: the lowest 10 percent, the lowest 25 percent, the second 25 percent, the third 25 percent, the highest 25 percent, and the highest 10 percent. The categories are based on unpublished March 2015 wages and salaries from the Employer Costs for Employee Compensation.

The percentiles were computed using earnings and scheduled hours of work reported for individual workers in sampled establishment jobs. Establishments in the survey are asked to report only individual worker earnings for each sampled job. For the calculation of the hourly percentile values, the individual worker hourly earnings are weighted and arrayed from lowest to highest. The values corresponding to the percentiles are:

| Characteristics | Hourly wage percentiles |  |  |  |  |
| :---: | ---: | ---: | :---: | :---: | :---: |
|  | 10 | 25 | 50 <br> (median) | 75 | 90 |
| Civilian workers | $\$ 9.09$ | $\$ 12.02$ | $\$ 18.18$ | $\$ 29.10$ | $\$ 44.36$ |
| Private industry workers | 9.00 | 11.64 | 17.40 | 27.89 | 43.27 |
| State and local government workers | 12.40 | 16.35 | 23.76 | 35.56 | 49.40 |

The lowest 10-percent and 25-percent wage categories include those occupations with an average hourly wage less than the 10th percentile value and 25th percentile value, respectively. The second 25percent category includes those occupations that earn at or above the 25th percentile value but less than the 50th percentile value. The third 25-percent category includes those occupations that earn at or above the 50th percentile value but less than the 75th percentile value. Finally, the highest 25 - and 10percent wage categories include those occupations with an average wage value greater than or equal to the 75th and 90th percentile value, respectively.
(Note: Individual workers can fall into an earnings category different from the average for the occupation into which they are classified because average hourly earnings for the occupation are used to produce the benefit estimates.)

The tables on employer and employee medical premiums (tables 3 and 4) include participants in all medical plans, with calculations for both single and family coverage. The calculations are not based on actual decisions regarding medical coverage made by employees within the occupations. Rather, the premium calculations are based on the assumption that all employees in the occupation can opt for either single or family coverage.

## Medical care

Medical care plans provide services or payments for services rendered in the hospital or by a qualified medical care provider.

## Retirement plans

Differences in retirement plan participation are influenced by type of plan offered. In defined benefit plans participation is often mandatory, after meeting eligibility requirements, while participation in defined contribution plans is often voluntary.

## Take-up rates

Take-up rates are the percentage of workers with access to a plan who participate in the plan. They are computed by using the number of workers participating in a plan divided by the number of workers with access to the plan, multiplied by 100, and rounded to the nearest one percent. Since the computation of take-up rates is based on the number of workers collected rather than rounded percentage estimates, the take-up rates in the tables may not equal the ratio of participation to access estimates.

## Comparing private and public sector data

Incidence of employee benefits in state and local government should not be directly compared to private industry. Differences between these sectors stem from factors such as variation in work activities and occupational structures. Manufacturing and sales, for example, make up a large part of private industry work activities but are rare in state and local government. Professional and administrative support occupations (including teachers) account for two-thirds of the state and local government workforce, compared with one-half of private industry.

Leave benefits for teachers
Primary, secondary, and special education teachers typically have a work schedule of 37 or 38 weeks per year. Because of this work schedule, they are generally not offered vacation or holidays. In many cases, the time off during winter and spring breaks during the school year are not considered vacation days for the purposes of this survey.

## Sample size

Data for the March 2015 reference period were collected from a probability sample of about 8,600 establishments in private industry and approximately 1,500 establishments in state and local government.

## Survey scope

The March 2015 NCS benefits survey represented approximately 131 million civilian workers; of this number, about 112 million were private industry workers and nearly 19 million were state and local government workers.

## Obtaining information

For research articles on employee benefits, see the Monthly Labor Review at www.bls.gov/opub/mlr/home.htm and Beyond the Numbers: Pay and Benefits at www.bls.gov/opub/btn. For further technical information, see Chapter 8, "National Compensation Measures," of the BLS Handbook of Methods at www.bls.gov/opub/hom/pdf/homch8.pdf.

1 Includes workers in the private nonfarm economy except those in private households, and workers in the public sector, except the federal government. See Technical Note for further explanation.

2 Surveyed occupations are classified into wage categories based on the average wage for the occupation, which may include workers with earnings both above and below the threshold. The categories were formed using percentile estimates generated using ECEC data for March 2015.

Note: Dash indicates no workers in this category or data did not meet publication criteria. For definitions of major plans, key provisions, and related terms, see the "Glossary of Employee Benefit Terms" at www.bls.gov/ncs/ebs/glossary20142015.htm.

[^0]:    1 Includes defined benefit pension plans and defined contribution retirement plans. Workers are considered as having access or as participating if they have access to or are participating in at least one of these plan types.

    2 The take-up rate is an estimate of the percentage of workers with access to a plan who participate in the plan, rounded for presentation. See Technical Note for more details.

    3 Includes workers in the private nonfarm economy except those in private households, and workers in the public sector, except the federal government. See Technical Note for further explanation.

    4 Surveyed occupations are classified into wage categories based on the average wage for the occupation, which may include workers with earnings both above and below the threshold. The categories were formed using percentile estimates generated using ECEC data for March 2015.

    Note: Dash indicates no workers in this category or data did not meet publication criteria. For definitions of major plans, key provisions, and related terms, see the "Glossary of Employee Benefit Terms" at www.bls.gov/ncs/ebs/glossary20142015.htm.

[^1]:    1 The take-up rate is an estimate of the percentage of workers with access to a plan who participate in the plan, rounded for presentation. See Technical Note for more details.

    2 Includes workers in the private nonfarm economy except those in private households, and workers in the public sector, except the federal government. See Technical Note for further explanation.
